

Variable Angle Pod

This angle pod is made for use with the following Le Maitre cartridges:

Product	Code
Streamer Cartridge	1219
Large Glitter Cartridge	1230
Large Confetti Cartridge	1232
Large Streamer Cartridge	1233

Other Le Maitre cartridges will not fit in the angle pod.

Instructions

The pod is connected to the Le Maitre pyroflash system in the usual way with a lead fitted with two three pin MALE plugs. The pod

should be secured in the position desired. Where these pods are used at high level, e.g. in lighting rigs, a safety chain should be used in addition to standard fixing.

A chain is provided with a fixing device at each end. This chain is for coupling the LARGE cartridge base to the angle pod (using one of the two holes in the side of the cartridge to any of the holes on the angle pod sheet metal sides).

In the unlikely event of the cartridge rebounding off the angle pod, this prevents the spent cartridge from ejecting.

Extra chains are available from Le Maitre Fireworks Ltd at the address given.

Coupling Chain

For use with Le Maitre Variable Angle Pod and Large Cartridges.

This chain is for coupling the LARGE cartridge bases to the angle pod using the fixing devices provided at each end.

Push the tee end of the chain through one of the two holes provided on the cartridge base and fix the key ring end to the angle pod using

one of the holes in the sheet metal sides.

In the unlikely event of the cartridge rebounding off the angle pod after ignition, this prevents the whole spent cartridge from ejecting.

Extra chains are available from Le Maitre Fireworks Ltd at the address given.
